Medical Clearance of the Older Fighter in Professional Combat Sports

Individuals 35 years of age and older should be subject to the following testing:

Individuals 40 years of age and older are subject to the following testing:

Initial testing should include:

- Magnetic Resonance Angiogram (MRA) of Brain

Annual testing should include the following:

- Magnetic Resonance Imaging (MRI) of the Brain without contrast
- Electrocardiogram (EKG)
- Stress Test
- Blood work including a complete blood count (CBC) and complete metabolic panel (CMET) which includes hepatic tests, blood urea nitrogen, creatinine and glucose.
- Ophthalmologic eye exam with pupil dilation and retinal examination

If any of these test results are abnormal at the outset or subsequently suggest deterioration in health status, consideration should be given to the license being denied, suspended or revoked.

Cardiovascular recommendations

- Annual medical screening should include the AHA 14-point cardiovascular evaluation (see below).
- ECG is recommended at initial licence and annually for athletes 35 and older.
- Blood pressure greater than 160/100 mm Hg is disqualifying from vigorous exercise and competition until controlled.
- If any other cardiovascular concerns are raised from history, physical examination, or ECG, athletes should be referred to a cardiologist for additional testing and medical clearance.

American Heart Association's 14-point cardiovascular evaluation.

Personal Medical History

1. Exertional chest pain/discomfort.
2. Exertional syncope or near-syncope.
3. Excessive exertional and unexplained fatigue; fatigue associated with exercise.
4. Prior recognition of a heart murmur.
5. Elevated blood pressure.
6. Prior restriction from participation in sports.
7. Prior testing for the heart ordered by a physician.

Family Medical History

8. Premature death--sudden and unexpected before age 50 due to heart disease, in one or more relatives.
9. Disability from heart disease in a close relative < 50.
10. Specific knowledge of certain cardiac conditions in family members: hypertrophic or dilated cardiomyopathy, long-QT syndrome or other ion channelopathies, Marfan syndrome, or clinically important arrhythmias.

Physical Exam

11. Heart Murmur-exam supine and standing or with Valsalva, specifically to identify murmurs or dynamic L ventricular outflow tract obstruction.
12. Femoral pulses to exclude aortic stenosis.
13. Physical stigmata of Marfan syndrome.
14. Brachial artery blood pressure (sitting) preferably taken in both arms
